3 WPIS Data Domains

Each WDD defines one or more electronic messages of which their data schema files will be encoded in XML format. One of the messages of the WDD is selected as the *data domain master message* (with message ID WDD-X.0, e.g. WDD-4.0), while other messages are variant messages and are denoted as sub-data domain messages (with message ID WDD-X.Y, e.g. WDD-4.1).

This release of the library of the WDD data schema files, their data file template files and their code association files comprise:
