## 1. Introduction

For easier understanding, the sample project-specific codes in sections below are from the project of Kwu Tung North (KTN) and Fanling North (FLN) New Development Areas (NDA), Phase 1. The sections below have been incorporated into the corresponding project-specific validation list.

## 2. Codes for Field 1 – Project

Field 1 – Project is a unique identifier which serves to indicate the project code (e.g. agreement number, contract number, future asset categorisation). This identifier should be assigned to each project stage (e.g. design, construction and operations) to determine the relationship with a particular asset.

### 3. Codes for Field 3.1 – Volume

Field 3.1 – Volume is a unique identifier which serves to indicate specific geospatial zone or volume within a project.

**4. Codes for Field 4.1 – Location**

Field 4.1 – Location is an identifier which serves to indicate specific location (e.g. slope number, feature code, building code) for geospatial coordination and future asset management. Common abbreviation codes (referring to Appendix X) should be used as far as practicable.

For locations that cannot be sufficiently covered by common abbreviation codes, additional location codes should be documented in the BEP for project.
